## Analog I/O PC/104 Module

## With Advanced Automatic-Autocalibration

## Highly Advanced Analog I/O Board

The Diamond-MM-32DX-AT includes a comprehensive suite of analog and digital features to fit a wide variety of embedded application needs.

## Unparalleled Analog Accuracy

Using patented automatic-autocalibration technology, DMM-32DX-AT provides accurate analog measurements across its entire rated operating temperature range, ensuring reliable performance for critical applications.

## Rugged Design

Extended temperature operation of $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$ is tested and guaranteed. The DMM-32DX-AT uses ceramic capacitors for durability in high altitudes or other harsh environments.

## Shortened Development Time

Diamond's advanced Universal Driver software is included free and provides a programming library that simplifies control of the board's features and enables you to develop your application software quickly.

- 32 analog inputs, 16-bit resolution
- Patented auto-autocalibration for high accuracy
- 250 KHz maximum sampling rate
- Interrupt based A/D data transfer with FIFO support
- 4 analog outputs, 16 -bit resolution
- 24 programmable direction digital I/O lines
- Counter / timers for A/D control and general use
- Low noise design

Extremely rugged $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}\left(-40^{\circ} \mathrm{F}\right.$ to $\left.+185^{\circ} \mathrm{F}\right)$ operating temperature

## Software Support

Diamond's Universal Driver software provides a high-level programming library for all of Diamond's data acquisition products. All data acquisition features are supported with easy-to-use function calls, resulting in a reduced learning curve and shortened application development time. Universal Driver works with Windows XP, CE, Linux, QNX and DOS. Application examples are included for each function and OS to provide a quick starting point for development.

## Key Features

The DMM-32DX-AT features 32 A/D input channels with high-accuracy 16 -bit resolution, 250 KHz maximum sampling rate, programmable input ranges, and userselectable single-ended / differential configuration.
The four D/A 16-bit output channels feature userselectable output ranges as well as a programmable waveform generator feature.

DMM-32DX-AT's 24 digital I/O lines feature direction programmability in 8-birt ports as well as a buffers for enhanced output current of -15mA (Logic 1) / 64mA (Logic 0). All DIO lines feature jumper-selectable pull-up / pull-down resistors as well as ESD protection devices to help prevent field failures.
On-board programmable counter/timer circuitry includes a 32-bit counter/timer for A/D and D/A sample timing, as well as a 16-bit counter/timer for general counting, timing, and programmable interrupt functions.

## Automatic-Autocalibration for Best Accuracy

Diamond's top-performing automatic-autocalibration circuitry enables you to calibrate the analog circuits under software control at any time, maintaining best accuracy under all conditions. An on-board micro-controller manages the autocalibration operation automatically for extreme accuracy and ease of operation. Temperatureand time-dependent measurement drift is eliminated, as the board can be calibrated as often as desired in just a few seconds to ensure accurate reading in all environments.
